

Carbon Data Management, Reduction
Planning, Reporting and Tracking

History

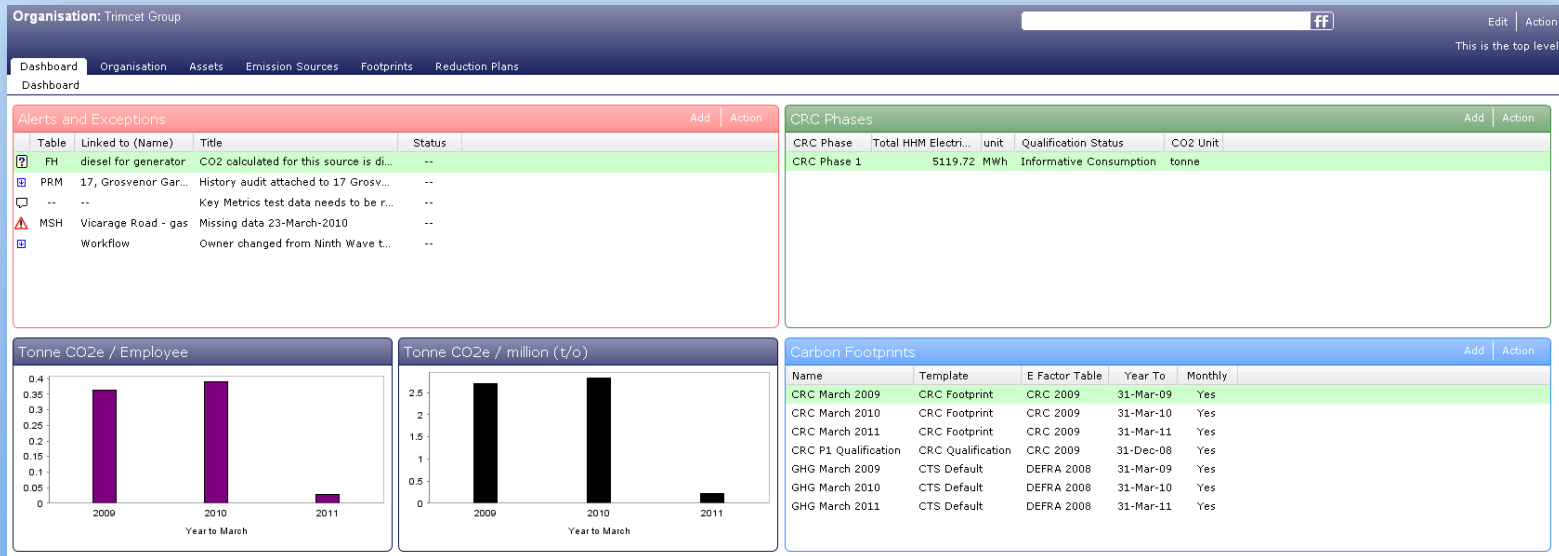

- CarbonOps are carbon management software specialists. We have supported the EU Energy Trading Scheme carbon reporting and trading requirements for a number of major UK utilities since 2004.
- Our ClimateLinked platform for carbon accounting now supports multiple carbon reporting schemes, including the CRC Energy Efficiency scheme and the GHG Protocol.

ClimateLinked

- Automated emission data capture
- Automatic reporting of missing or erroneous data
- Targeting and tracking – carbon and energy
- Full audit trail support for collected data and documentary evidence
- Centrally updated factors, sources and calculations
- Emission reduction planning capture with associated financial analysis;
- Full integration with internal systems, processes and workflows
- Modelling and reporting under multiple schemes including the CRC, Greenhouse Gas Protocol and the Carbon Trust Standard
- Customised management reporting, views of the organization footprint through legal structure, assets, cost centres and business units
- Full user security - access levels and views as required

We have successfully implemented our platform across multiple sites in the UK for major international organisations, collecting thousands of meter-readings and other emission data per day and supporting hundreds of users. We understand the challenges and issues of implementing large-scale carbon reporting systems and have a proven track-record of delivery.

ClimateLinked

Customize for each user, examine:

- Alerts and Exceptions – Missing data, manual data overrides, values not in tolerance ...
- Key metrics – carbon output per unit turnover, per square metre ...
- Carbon sources – model all underlying emission sources, meters, sub-meters, buildings, vehicles, assets and resource groups ...
- Understand Carbon footprints - organizational units, business units, costs centres, buildings ...
- Costs of carbon – allocate correctly to departments, customers, tenants ...
- Zero-install, rich web based interface – customize for your organization's logos and colour schemes ...

CRC Phase Header: CRC Phase 1 - Trimcet Group plc

ff Edit | Action
Trimcet Group

CRC Qualification | CRC Determination | CRC Phase Details
CRC Qualification | CRC Registration | CCA Exemption

CRC Phase 1 - Qualification

Total Qualifying CRC Electricity in the year to 31-Dec-2008 = 3,599 MWh

Qualification Status

Your HHM electricity consumption was between 3,000 and 6,000 MWh in the qualification year. You will need to provide contact details for your organisation together with details of your total supply of HHM electricity during the period.

The Carbon Reduction Commitment User Guide

This document provides a step by step guide to the Carbon Reduction Commitment (CRC) – the UK's new carbon emissions trading scheme that will start operating in April 2010. It explains what the scheme is, who it applies to and how it will work.

01. Introduction to CRC
02. Who is eligible for CRC
03. Preparing for CRC
04. CRC Qualification Phase
05. CRC Qualification
06. Supplier Selection
07. Contract & Meter Installation
08. Metering of Data

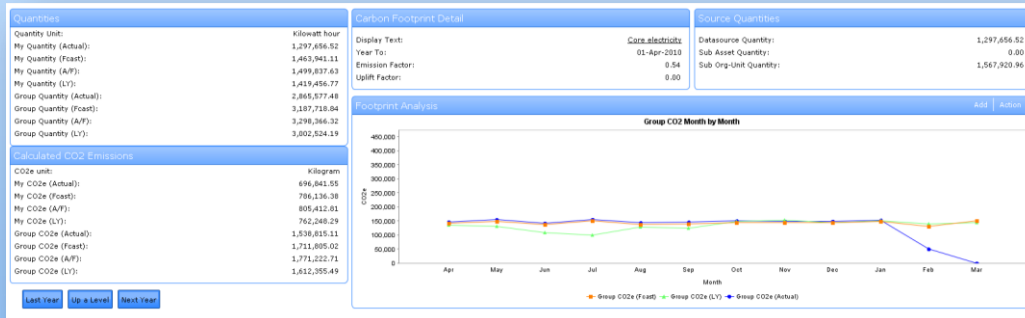

Annual HHM Electricity Consumption

Meter ID	Metered Supply	Customer	HHM Electricity	Exclusions	Exclusion Type	Qualification Total	Unit
HHM Electricity Supplies (5 records)							
HG7 DDS-67-908	55 Broadway - Electricity	Trimcet Group plc	1,381.01	0.00	--	1,381.01	MWh
EM 1288867	Brigg St Electricity	TrumpIT Manufacturing Ltd	1,520.43	1,520.43	Transport	0.00	MWh
9760987p	Broadacre Electricity	TrumpIT plc	750.90	0.00	--	750.90	MWh
e12345	Vicarage Road - electricity	TrumpIT Supply plc	715.11	0.00	--	715.11	MWh
e17698	Westland Road - electricity	TrumpIT Supply plc	752.28	0.00	--	752.28	MWh
			5,119.73	1,520.43		3,599.30	

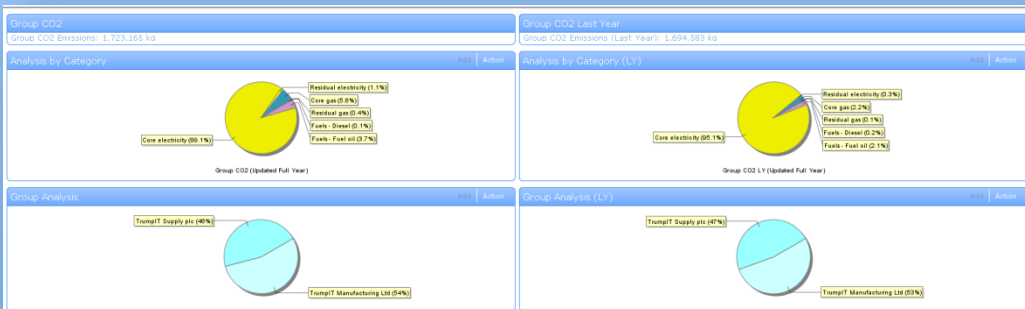

Add | Action

- Understand different schemes, including the CRC Energy Efficiency scheme, GHG Protocol (Carbon Disclosure Project etc) and the CarbonTrust Standard.
- Model new schemes and customize schemes easily
- Stay compliant with automatic scheme factor and calculation updates
- Use the ^{system} guide for scheme requirements, including Qualification criteria, evidence packs, compliance reports and structured step-by-step screens
- Report multi-national organizational structures under more than one scheme, support your UK CRC compliance requirements and your international GHG reporting with one solution

ClimateLinked

- Analyse data, measure actual performance against targets
- See the effects of reduction planning on targets
- Track against historical data

- Step through the data to understand and visualise carbon sources in the organization
- Identify “hot spots” for reduction management

- Store documentary evidence and capture energy data

ClimateLinked

- The ClimateLinked platform is highly configurable to fit the needs of your user groups and clients
- ClimateLinked supports a rigorous and practical approach to Carbon data management
- ClimateLinked enables the financial analysis required for Emission Reduction planning and Offset Allowance purchase strategy
- ClimateLinked makes scheme compliance possible without unnecessary cost and disruption

Contact Us

- If you have a need to manage, track and understand your carbon data
- If you have clients who need to be able to manage carbon data or report under carbon reporting schemes
- If you want to be able to offer your own brand carbon software
